## PROJECT EXPERIENCE

### **Solubon LTD – Web Dashboard**

**November 2016**

Dashboard is use to manage inventory, schedule, payroll, status updates and files management of all actives projects. It was created using the following technologies Angular.js, Node.js, Express.js, MongoDB, Socket.io.  
Third Party API's used: Dropbox API and SendGrid API

### **Manage a Book Trading Club**

**April 2016**

It's an app that allows you to catalogue your books online (just the image and name, not the actual book since it's not a real app), see all of the books the users own, request to borrow other users 'books and easily manage books and request from your dashboard. It was built with the MEAN Stack using passport.js to support user authentication.

### **Chart the Stock Market App**

**February 2016**

It's an app built to track market stocks, it uses socket.io to sync all clients connected built with the MEAN stack. It lets the user add, remove and update stocks from the chart, any changes to the chart is view on every client connected. The data is coming from the Quandl financial API and the chart is built with the highchart library.
