PROJECT EXPERIENCE

Solubon LTD – Web Dashboard

November 2016

Dashboard is use to manage inventory, schedule, payroll, status updates and files management of all actives projects. It was created using the following technologies Angular.js, Node.js, Express.js, MongoDB, Socket.io.
Third Party API's used: Dropbox API and SendGrid API

Manage a Book Trading Club

April 2016

It's an app that allows you to catalogue your books online (just the image and name, not the actual book since it's not a real app), see all of the books the users own, request to borrow other users 'books and easily manage books and request from your dashboard. It was built with the MEAN Stack using passport.js to support user authentication.

Chart the Stock Market App

February 2016

It's an app built to track market stocks, it uses socket.io to sync all clients connected built with the MEAN stack. It lets the user add, remove and update stocks from the chart, any changes to the chart is view on every client connected. The data is coming from the Quandl financial API and the chart is built with the highchart library.
